## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-27 are allowed over prior art.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1-9 and 19-21, the prior art fails to teach an imaging system having one or more distributed x-ray sources arranged relative to a volume of interest and one or more x-ray detectors, wherein at least one of the one or more x-ray sources or the one or more x-ray detectors are displaceable transversely and one or more x-ray detectors are stationary to allow an unimpeded path for the x-ray beam as claimed in independent claims 1 and 19.

Regarding claims 14-18, the prior art fails to teach an imaging system having a plurality of x-ray sources arranged relative to a volume of interest and a plurality of x-ray detectors, wherein at least one of an x-ray source from the plurality of x-ray sources or a x-ray detector from the plurality of detectors are configured to be displaced transversely and the remaining x-ray detectors from the plurality of detectors are stationary to allow an unimpeded path for the x-ray beam as claimed in independent claims 14.

Regarding claims 10-13, 22 and 24, the prior art fails to teach an imaging system having one or more distributed x-ray sources surrounding an imaging volume, and one or more x-ray detectors (or sections) configured to be stationary and one or more x-ray detectors (or sections) configured to move transversely or nutate for either opening of at least one individual radiation beam aperture or covering at least a portion of the aperture as claimed in independent claims 10-13, 22 and 24.

Regarding claim 23, the prior art fails to teach an imaging system having one or more distributed x-ray sources surrounding a desired portion of an imaging volume and one or more x-ray detectors wherein, at least one of the x-ray source or the x-ray detector is displaceable transversely and the one or more x-ray detectors are stationary to allow illumination of the desired portion of the imaging volume as claimed in independent claim 23.

Regarding claims 25-27, the prior art fails to teach a method of scanning a volume by triggering a distributed x-ray sources, displacing transversely one or more x-ray detectors to allow unimpeded path for the radiation beam to illuminate an imaging volume and displacing one or more x-ray detectors opposite to the distributed x-ray source to intercept a transmitted radiation beam, wherein the one or more x-ray detectors comprises stationary detectors and movable detectors as claimed in independent claim 25.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***
